The University of Pennsylvania (Penn) Treebank Tag-set

Listed alphabetically below are the standard tags used in the Penn Treebank. Each tag has examples of the tokens that were annotated with that tag. The examples are taken directly from the Penn Treebank lexicon that is supplied with Eric Brill's Transformation-Based Part-of-Speech Tagger. This is the tagger that is used as the basis for the AMALGAM e-mail tagging server.

The Penn scheme incorporates special `vertical slash' tags for occasions when the part-of-speech is ambiguous. Consider the sentence: **The duchess was entertaining last night.** (This example is taken from ``Part-of-Speech Tagging Guidelines for the Penn Treebank Project" by Beatrice Santorini which is available from the the Penn Treebank site.) Does **entertaining** mean that she was hosting an event, in which case the word would be a present participle verb, **VBG**, or does **entertaining** act adjectively (**JJ**) implying that the Duchess was good company? Either case is possible so the Penn Treebank developers allow both tags to apply at the same time. In this case, **entertaining** is assigned the tag **JJ|VBN**. The vertical slash tags are not listed in the table below but, for completeness, those that were found to occur at least once in the Penn Treebank lexicon are listed afterwards.

The tokenisation of genitives differs in the Penn and the International Corpus of English (ICE) schemes from all of the other tagging schemes of the AMALGAM tagger. Penn and ICE do not leave the genitive marker attached to the word but strip it off. The AMALGAM tokeniser recognises this difference and removes the marker from the ends of words. There are other variations in how tokenisation is handled by the different schemes but in order to facilitate comparisons AMALGAM tokenises input text the same way, regardless of scheme, except for this one example.

If the list of examples ends with an ellipsis marker then the tag category can be assumed to be an open class.
